Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: the prior art does not teach a connector structure of a permanent magnet DC motor with brushes and a lead structure in a connector body disposed outside of a motor housing. The lead having leads connected to a power source and having ends with leg portions connecting the leads to the ends. The connector body having a printed circuit board mounted within a portion of the connector body and carrying at least one electro-magnetic interference (EMI) suppression component constructed to suppress EMI generated by the motor, where the ends of the lead structure are soldered to the printed circuit board so that current can be provided through the printed circuit board to the brushes and having the legs portions being generally parallel with the printed circuit board, and where a contact member electrically connects the printed circuit board and the metal motor housing so that at least one EMI suppression component couples the brushes of the motor to the metal motor housing to cause the metal motor housing to become an AC ground and EMI shield. The connector body including a plastic cover structure over-molded to cover an entire surface of the printed circuit board and having a surface defined by the over-molded cover structure being completely exposed to atmosphere.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
